## OFFICES OF AFRICAN LAKES CORPORATION

It is interesting to look at the architecture and style of building. The Chinde Concession was close to sea level and building on stilts would offer some protection from rising waters. There were many deaths from diseases amongst the early travellers. Anita McCullough in Memoir 32, adds that ALC adapted the style from the Southern States of America in order to improve the health of everyone. The traditional glass thatch was phased out in preference to these “airy, plantation style dwellings”.
